

OraVet Chews clean and protect against plaque and tartar¹

Advanced dual-cleaning action is the difference

CLEAN

Chewing action helps scrub away the plaque

PROTECT

OraVet Chews form a protective barrier against the bacteria that lead to plaque and tartar build up

Get the most out of your dog's dental cleanings

Regular dental cleanings are an important part of good oral health for your dog, and effective daily dental care can help make those cleanings go more smoothly.

OraVet Chews have been shown to extend the benefit of veterinary dental cleanings by reducing plaque and tartar build up and bad breath.¹ Ask your veterinarian about using OraVet Chews following your dog's next cleaning.

ORAVET
DENTAL HYGIENE CHEWS
Serious Oral Care Made Simple

A breath of fresh air in oral care for dogs

OraVet[®] Dental Hygiene Chews make it easy to clean teeth and protect against the bacteria that lead to plaque, tartar, and bad breath

Each daily OraVet Chew:

- Creates a protective barrier, preventing the attachment of bacteria that lead to plaque, tartar, and bad breath³⁻⁶
- Loosens existing plaque and tartar to make it easier to remove^{5,7}
- Contains the protective barrier ingredient delmopinol
- Has a taste that dogs love²

Stop bad breath from coming between you and your dog

OraVet[®] Dental Hygiene Chews provide easy, daily oral care that fights the source of bad breath by reducing plaque and tartar

ORAVET
DENTAL HYGIENE CHEWS
Serious Oral Care Made Simple

Say goodbye to
"doggie breath"

OraVet® Dental Hygiene Chews are clinically proven to reduce bad breath in dogs¹

Some people may think it's normal for a dog's breath smell bad. But bad breath is not normal. Without regular cleaning, plaque and bacteria build up on teeth and gums causing bad breath. If not removed, plaque hardens and turns into tartar and can lead to persistent bad breath.

With OraVet Chews, your veterinarian can now provide you with an effective and convenient way to stop your dog's bad breath before it starts.

OraVet Chews are easy to give once daily because they have a taste dogs love.²

The benefits of delmopinol

The special ingredient in OraVet Dental Hygiene Chews

The way in which OraVet Chews work is due to an ingredient called delmopinol. Used for years in a human oral rinse, delmopinol gives OraVet Chews their unique cleaning action.

Each chew contains delmopinol which is released throughout the mouth as soon as your dog starts chewing. Delmopinol coats the teeth, tongue and gingiva to form a protective barrier that prevents the attachment of bacteria that lead to the formation of plaque, tartar, and bad breath.³⁻⁶

That's all it takes to provide serious daily dental care to your dog!

Dogs love OraVet Chews, and you will too!

A simple, tasty way to provide at-home dental care

OraVet Chews have a taste dogs love. How do we know? Because in a clinical trial, most dogs studied took OraVet Chews the first time offered.¹ And in a separate study owners said they enjoyed giving OraVet Chews to their dogs.² Who knew cleaning your dog's teeth could be this easy!

Available in 4 Low-Calorie Sizes

	Size	Dog Weight	Calories per Chew
	Extra Small	For dogs up to 4.5kg	26.8
	Small	4.5-11kg	47.7
	Medium	11-23kg	80.5
